

# Gobelin

Dana je mreža kvadratkov (gobelin). Nekatere kvadratke moramo pobarvati. Število števil ob desnem robu vsake vrstice in pod vsakim stolpcem pove, koliko skupin pobarvanih kvadratkov je v posamezni vrstici oziroma stolpcu. Številke pa povedo, koliko zaporednih pobarvanih kvadratkov je v posamezni skupini. Med dvema skupinama pobarvanih kvadratkov mora biti vsaj en nepobarvan kvadratek. (Na primer: 1, 3, 1 pod petim stolpcem pomeni, da so v tistem stolpcu tri skupine pobarvanih kvadratkov, zgornja skupina ima 1, druga 3, spodnja pa 1 pobarvan kvadratek.) Če kvadratek zanesljivo ni pobarvan, ga lahko označiš z x.

Pobarvaj gobelin!

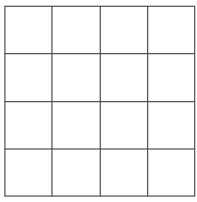

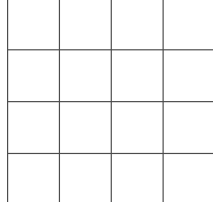

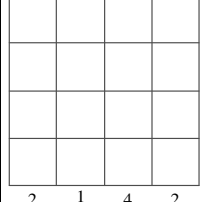

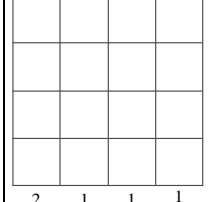

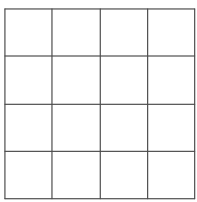

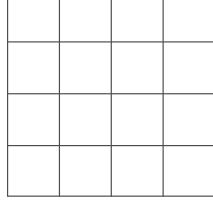

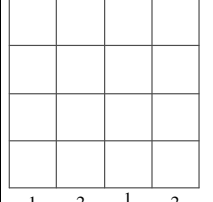

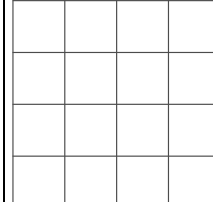

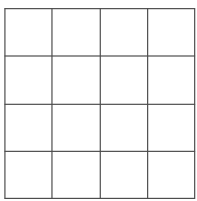

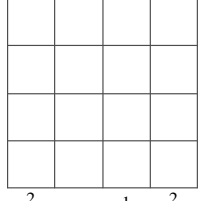

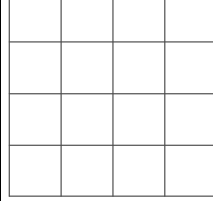

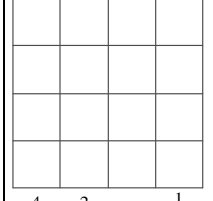

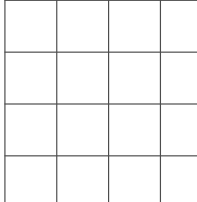

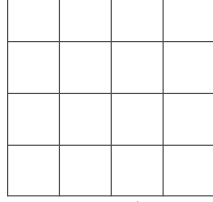

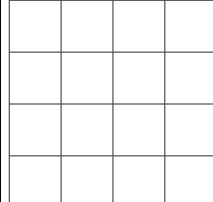

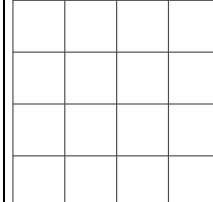

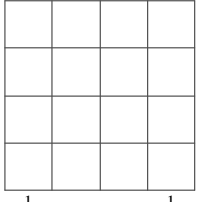

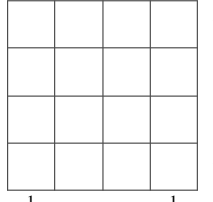

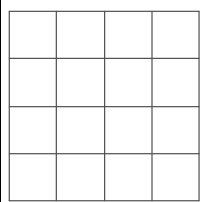

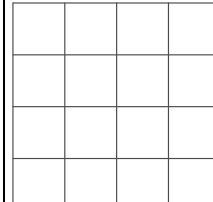

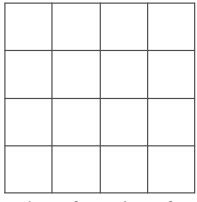

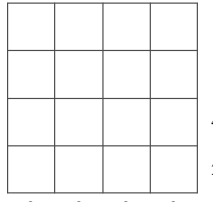

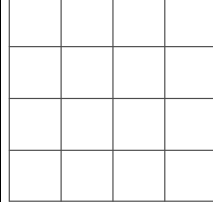

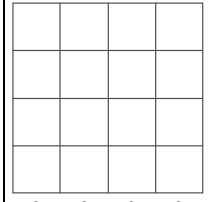

Rešitev:

Sledijo računalniško generirani gobelini, ki jih je s programom v *mathematici* izdelal I. Hafner. Ni nujno, da je rešitev gobelina ena sama.
